How to upload audio files to SoundCloud for KASOL applications

Make sure your audio file is in one of the following formats:

- AIFF
- WAVE (WAV)
- FLAC
- ALAC
- OGG

- MP2
- MP3
- AAC
- AMR
- WMA

Note: if you need to convert or edit audio files before you upload, consider using the free audio editor Audacity, which can be downloaded here: http://web.audacityteam.org.
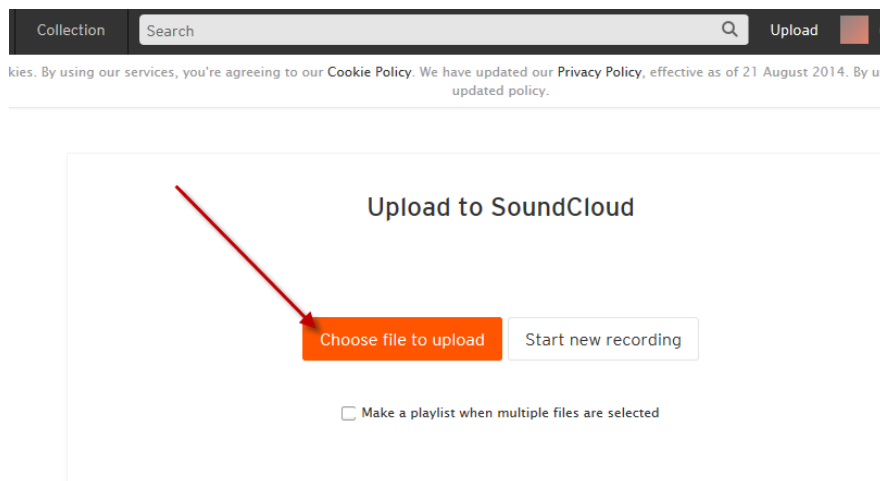

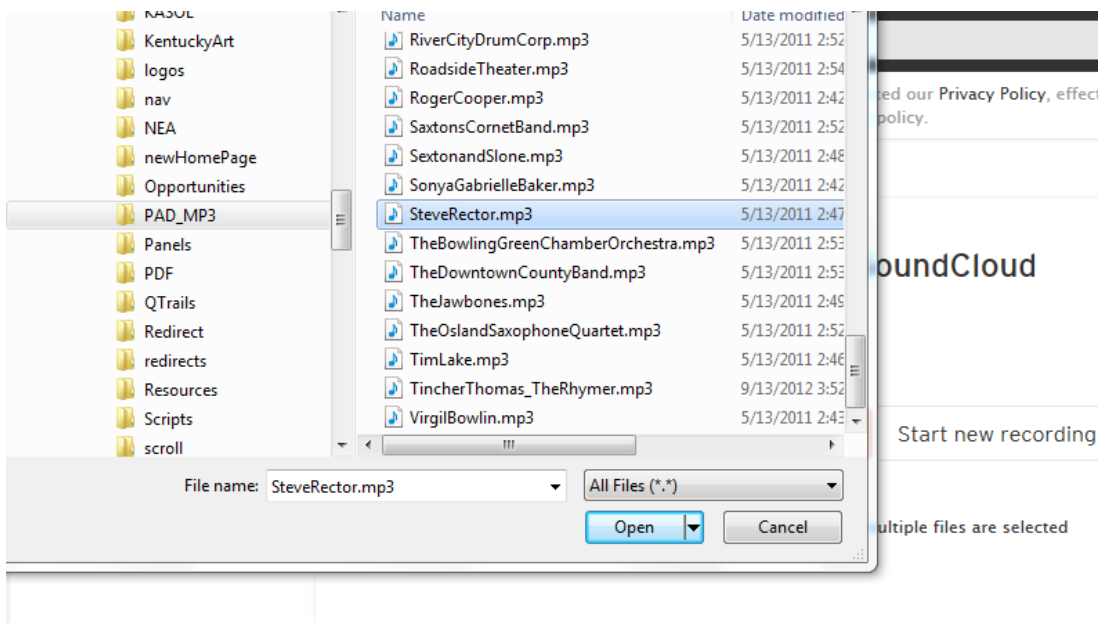

Step-by-step instructions

1. Go to http://soundcloud.com and create an account if you do not already have one.
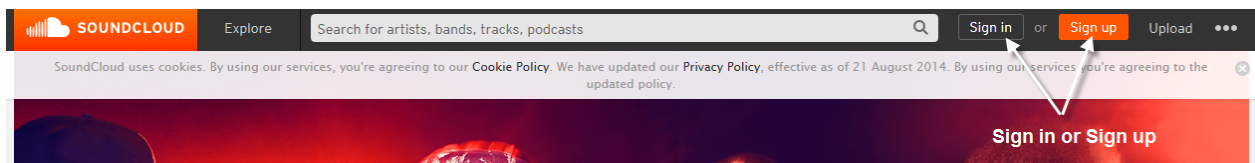

2. Once you have an account, **Sign In** and click the "**Upload**" button near the top right corner.

3. Click "**Choose file to upload.**"

4. Navigate to the file you want to upload and click "**Open**."

5. As the file uploads, you can begin typing in the required fields: Title and Tags. The Description field is optional.

Select "**private**" or "**public**" next to the words "Track will be." SoundCloud assigns a secret link to private audio so that only users who have the link can listen.

6. Play the track to make sure you are satisfied with the upload.
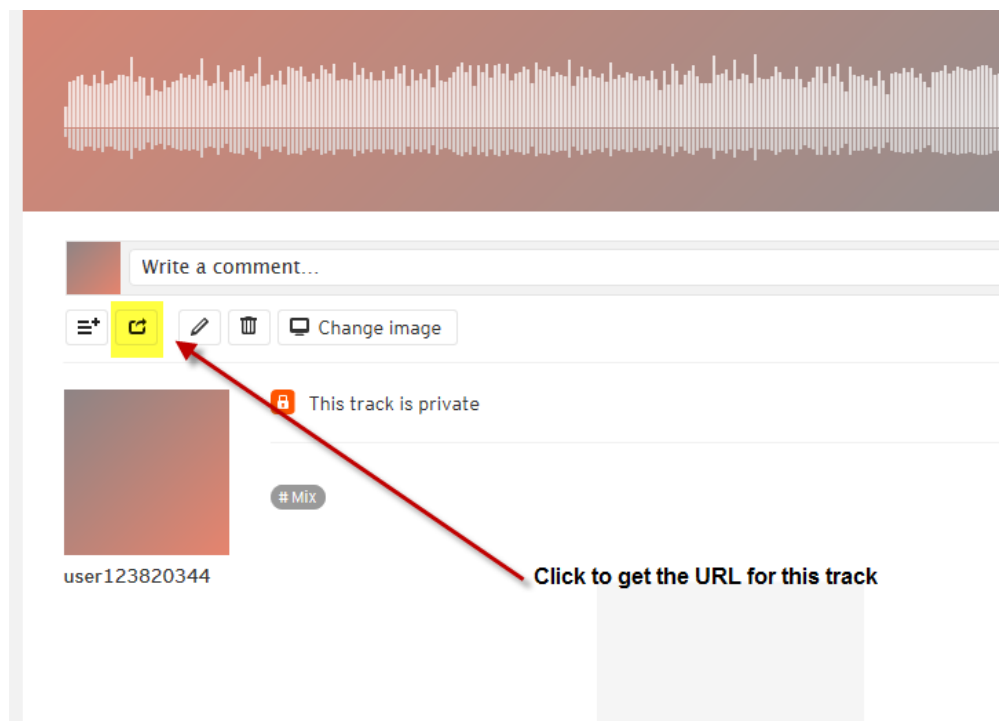

7. Click the "**Share**" button.

8. A highlighted URL will appear. Copy and paste this URL into your application.
